INTRODUCTION

1

- This project is a web-based platform designed to provide online skill learning opportunities for users.
- It allows users to register and login securely using authentication mechanisms like password hashing and session management.
- The system supports different roles such as Student and Instructor with role-based access control.
- Students can browse, search, and enroll in various courses available in the marketplace.
- Instructors can create, update, and manage courses and track enrolled students.
- The application is developed using HTML, CSS, JavaScript, PHP, and MySQL.
- The main goal of this project is to provide an accessible, user-friendly, and secure online learning environment.

PROBLEM STATEMENT

The picture can't be displayed.

- In today's digital era, many learners face difficulty in accessing a centralized platform that provides structured and affordable skill-based education.
- Existing systems often lack proper organization of user roles, making it difficult to manage students, instructors, and administrators efficiently.
- Many online platforms do not ensure secure authentication, leading to risks such as unauthorized access and data breaches.
- There is a need for a system that allows instructors to easily create, manage, and update courses without technical complexity.
- Traditional systems lack modular architecture, making maintenance, scalability, and feature enhancement difficult.
- There is also a need for proper database management to store and retrieve user, course, and enrollment data efficiently.
- Therefore, this project aims to develop a secure, modular, and role-based full-stack web application that addresses these challenges and provides an effective online learning marketplace.

OBJECTIVE(S)

The picture can't be displayed.

1

- To design a responsive and user-friendly interface

2

- To ensure secure data storage using MySQL database

3

- To prevent SQL injection using prepared statements

- To build a modular and scalable system architect

4

- To develop a full-stack web-based learning marketplace

5

- To implement secure authentication using hashing and sessions

6

- To provide role-based access for students and instructors

7

- To enable course creation, management, and enrollment

8

- To design a responsive and user-friendly interface

9

- To ensure secure data storage using MySQL and prepared statements

PROPOSED SYSTEM

The picture can't be displayed.

1

- The system provides a centralized platform for online skill learning

2

- It supports secure authentication using password hashing and sessions

3

- Role-based access is implemented for students, instructors

4

- Users can easily browse, search, and enroll in courses

5

- Instructors can create, update, and manage course content

6

- The system uses a modular architecture for better scalability and maintenance

7

- Data is securely stored and managed using a MySQL database

8

TECHNOLOGIES USED

The picture can't be displayed.

1

Frontend:

- HTML5
- CSS3

2

Backend:

- PHP (Core PHP)
- Session Management
- MySQL(Database Connectivity)

3

4

Database:

- MySQL
- phpMyAdmin

5

6

Tools:

- XAMPP (Apache + MySQL Server)
- Notepad
- Web Browser (Chrome)

8

9

Hardware / Software Requirements:

- **System:** Windows 10
- **RAM:** Minimum 4GB
- **Software:** XAMPP Server

MODULE DESCRIPTION

Module 1: User Authentication Module

- 1 Handles user registration and login.
- 2 Ensures secure access using password hashing and session management.

Module 2: Course Management Module

- 3 Allows instructors to add, update, and delete courses.
- 4 Displays available courses for students in the marketplace.

Module 3: Enrollment Module

- 5 Enables students to enroll in courses.
- 6 Manages enrollment records and course access.

Module 4: Learning & Progress Module

- 8 Allows students to access enrolled courses.
- 9 Tracks learning progress and completion status.

Module 5: Dashboard Module&Module

Provides dashboards for students, instructors, and admin.
Manages users, courses, and overall system activities.

IMPLEMENTATION SCREENSHOTS

The picture can't be displayed.

7

8

9

The screenshot shows the 'Skill Academy' login page. At the top, there are links for 'Home' and 'Courses'. The main heading is 'Welcome back' with a subtext 'Login as student or teacher.' Below this are input fields for 'Email' and 'Password'. A prominent blue 'Login' button is centered. At the bottom left, there is a link 'New here?' followed by a 'Register' button.

Login Page :

- Allows registered users to enter email and password to access the system
- Verifies credentials using secure authentication (password hashing & sessions)
- Redirects users to respective dashboards based on their role (student/instructor/admin)

Register Page :

- Enables new users to create an account by entering name, email, and password.
- The system stores the user details securely in the database
- After successful registration, the user can login and access the academy marketplace.

The screenshot shows the 'Create your account' registration page. It includes a note: 'This system supports only students and teachers.' The form has a dropdown menu for 'I am a' with 'Student' selected. Below are input fields for 'Full name', 'Email' (containing 'abhinay@gmail.com'), 'Password' (with a strength indicator 'Minimum 8 characters.'), and 'Confirm password'. A blue 'Register' button is at the bottom. At the very bottom, there is a link 'Already have an account?' followed by a 'Login' button.

IMPLEMENTATION SCREENSHOTS

•Certificate Generation

The system generates a certificate automatically after the student completes the course with details like name, course title, and completion date.

•Certificate Download

Students can directly download their certificate in PDF format from the dashboard for future use.

IMPLEMENTATION SCREENSHOTS

The picture can't be displayed.

Course Marketplace

- Displays available courses with details like title, description, and price
- Allows users to search, filter, and select courses for enrollment

- Displays all courses enrolled by the student in one place

- Allows users to access course content and track their learning progress

Ask a doubt

Ask your question related to an enrolled course.

Course
Data Structures in C (Playlist)

Subject
PUSH/POP

Question
Describe your doubt clearly...

Submit doubt

•Doubt Submission

Students can post their questions or doubts related to lessons or assignments through the dashboard.

•Instructor Response

Instructors can view and reply to student doubts, providing clear explanations and solutions.

Update profile

Change password

Current password

New password

Confirm new password

Update password

1.View & Update Profile Details

Users can view their email, role, joining date, and update their full name through the profile section.

2.Change Password

Users can securely update their password by entering the current password and setting a new one.

ADVANTAGES & LIMITATIONS

Advantages

- Provides a centralized online learning platform
- Secure authentication ensures data safety
- Role-based access improves system control
- Easy course management for instructors
- User-friendly and responsive interface
- Scalable and modular architecture

Disadvantages

- Requires internet connection to access
- Basic security (not fully industry-level)
- Depends on server performance (XAMPP/local)
- Limited features compared to large platforms
- Maintenance required for updates
